

# محمد البردوني Mohamed Bardouni

Product Engineer — Web · Mobile · AI

Morocco — working worldwide · Available for new projects
· mbardouni44@gmail.com

## SUMMARY

Software developer with 8+ years of experience building complete digital products from idea to launch. I work across every layer — database, backend, frontend, mobile, AI integration and deployment — from one pair of hands, with no coordination overhead between vendors.

I started on desktop systems (VB.NET, C#) — pharmacy and education management — moved through Android (Java), then Flutter, then modern web platforms and AI systems. That arc is visible across 63 public GitHub repositories since 2016, and it means I read legacy systems and build modern ones with equal comfort. I also run my own infrastructure: Contabo, Hostinger, Docker and CI/CD.

## CAREER ARC

2016 — 2018

### Desktop systems

Management systems for pharmacies and education in VB.NET and C# — inventory, POS, admin workflows.

---

2018 — 2020

### Android and web

Android apps in Java and Kotlin; sites and platforms in PHP and WordPress.

---

2020 — 2022

### Flutter and modern backends

Moved to Flutter for one codebase across iOS and Android, backed by Laravel APIs and relational databases.

---

2022 — now

### Platforms and AI

SaaS platforms in Laravel and Next.js, government portals, and AI model integration with Docker-based DevOps.

## EXPERIENCE

2022 — Present

### Senior Flutter & Full-Stack Developer · Freelance

Cross-platform Flutter apps with complex state management (BLoC, Riverpod) on clean architecture. Firebase for real-time features, Laravel/Node.js back ends feeding the front ends over REST, CI/CD with GitHub Actions, and 3 apps shipped to Google Play.

2020 — 2022

### Flutter & Mobile Developer

Moved from native Android to Flutter. Migrating existing apps cut the codebase by roughly 60% at feature parity, alongside reusable component libraries and custom painters for bespoke UI.

2018 — 2020

### Android & Web Developer

Native Android in Java and Kotlin — the platform-internals depth that still pays off whenever Flutter needs platform channels.

2016 — 2018

### Desktop Systems · VB.NET · C#

Inventory systems, POS and administrative tools. Where the software-architecture fundamentals I still rely on came from.

## EDUCATION

Secondary

### Baccalaureate · Morocco

Completed secondary education, then chose to keep training myself rather than take the university route — a deliberate decision, not a stop.

2016 — Present

### Self-taught, continuously

Everything I work with I taught myself: from VB.NET and C# through Flutter, Laravel, Next.js and AI integration. 63 public GitHub repositories since 2016 are the record of it, and the Arctic Code Vault contribution is part of that trail.

## SKILLS

### Backend

Laravel · PHP · Node.js · REST APIs · MySQL · PostgreSQL · Redis

### Frontend

Next.js · React · TypeScript · JavaScript · Tailwind · HTML/CSS

### Mobile

Flutter · Dart · Java · Kotlin · Firebase

### AI & automation

Python · OpenAI · Gemini · Claude · n8n · Prompt design

### DevOps

Docker · CI/CD · Linux · Nginx · Contabo · Hostinger · k3s

### Legacy

VB.NET · C# · CodeIgniter · Migration

## LANGUAGES

Arabic — Native · English — Professional · French — Working

## SELECTED PROJECTS

### Beldify
beldify.com

Multi-vendor e-commerce platform — Laravel and Next.js, in production.

### Aqvioo
Google Play

AI content-creation app — video and images from a text prompt.

### Uplevel X
Google Play

AI leadership-development platform — Flutter and Firebase.

### Sanad Therapy
Google Play

Mental-health platform — video sessions with licensed therapists.

### ArabForm Pro

AI-powered smart form system with automated workflows.

### CharityApp
GitHub

Android app for donations and charity management (Java).

### PharmacyInv · TAALIMWODOOE

Desktop management systems for pharmacies and education — inventory and POS (VB.NET).

### alarm_recorder

Flutter utility combining smart alarms with audio recording.
